

# MONTE VISTA SCHOOL DISTRICT

Inspiring the Pursuit of Excellence, *One Student at a Time!*

## Tips for screening young students

*Do you currently have a fever\* or **new** onset of chills or muscle aches?*

Ask: Do your arms and legs feel the same as they always do?

*Are you experiencing a **new** sore throat, severe headache or loss of taste or smell?*

Ask: Did your toothpaste taste the same as it always does? Were you able to eat breakfast this morning without your throat/neck hurting?

*Are you experiencing a cough that is **new**, uncontrolled AND causes difficulty breathing (for students with chronic allergic/asthmatic cough, a change in their cough from baseline)?*

Ask: Have you been coughing a lot today? More than you always do? Does your cough make it hard for you to breathe?

*Are you experiencing any **new** symptoms of diarrhea, vomiting, or abdominal pain?*

Ask: Do you have a stomachache today that has made you throw up or need to use the bathroom more than usual?
